PROJECTS

COVID-India Tracker

HTML, CSS, JS, Chart.JS, JAVA, HIBERNATE, MYSQL

In this project I created an fully functional **website/ web-application** which can show users information about **COVID-19** with **dynamic API**, users can also see **news** about COVID which updates **daily**, users can **login** and give a **test** to check they have COVID **symptoms** or **not**.

It's **UI** contains two modes **dark** and **light** which can be stored into **local storage** and this can be installed as an **application** on **desktop** or **mobile device** and it's **responsive** for **multiple size displays**.

Country-News Founder

HTML, CSS, JS, REACT JS, VITE JS

This project is created using **REACT JS** where user can see details about particular **country** like it's **population**, **area**, **spoken languages**, **regions** etc.

User can interact with **particular** country section and see **daily news** about selected **country**.

Page link: <https://chetan-kk.github.io/Country-Founder-React/>

Google Clone

HTML, CSS, JAVASCRIPT

This project is copy of **google search page** where user can search for almost anything,

Here user can search for either the **details** or **images**.

These search results come from **Apify's API**.

Page link: <https://chetan-kk.github.io/Google-clone-with-API/>

3D Portfolio website

HTML, CSS, JAVASCRIPT, THREE JS, WEBGL, GSAP

This project is mostly based on **THREE JS**, **WEBGL**, where I have created an awesome 3D environment with planets and starts with cool light effect and 3D **motion design** and for users interactions I used some **JAVASCRIPT** libraries like **GSAP** and **TILT JS**.

Static Amazon home clone

HTML, CSS

This project is based on CSS fundamentals where I have created full clone of Amazon's home page with **CSS3**.

Page link: <https://chetan-kk.github.io/Amazon-clone-only-CSS/>
